DR Congo is one of the key partner countries of VLIR-UOS.. DR Congo has one of the most important budgets in the 2017-2021 program of the VLIRUOS. Between 2003 and 2020, the cooperation between

the VLIR-UOS and DR Congo represents more than €29 million, including 2 long term Institutional University Cooperation programmes (IUC) and almost 100 short-term projects.

The IUC in progress with the **University of Kisangani** and the Catholic **University of Bukavu** form the heart of the DR Congo country program, in addition to cross-cutting programmes in quality assurance and English academic.

More detailed information can be found on our [DR Congo country page](#) on the VLIR-UOS website.

1.2 Ongoing projects and future calls (2022-...)

List of ongoing projects in 2022						
Type	Runtime	Title	Flemish promoter	Local promoter	Local institution	Total budget (€)
IUC	2021-2023	Institutional University Cooperation with Université Catholique de Bukavu (UCB) (phase out)	Benoit Nemery de Bellevaux (KUL)	Wenceslas Ruhana Mirindi Busane	Université Catholique de Bukavu	20.000,00

TEAM	2022-2027	Social resilience after sexual violence in Eastern DR Congo: from decay over reparations to accountable governance	Maria Iniesta, (UG)	Germaine Furaha	Université Evangélique en Afrique	275.389,40
TEAM	2022-2027	Improving treatment and outcome of newborns with asphyxia in the Global South	Gunnar Naulaers, (KUL)	Therese Biselele	Université de Kinshasa	275.546,70

Table 1 Ongoing VLIR-UOS projects that will continue in FYP II

Abbreviations (type): IUC=Institutional University Cooperation; SI=Short Initiatives, TEAM projects. Abréviations (Institutions flamandes): KUL=Université Catholique de Louvain; UG=Université de Gand; UA=Université d'Anvers; UH=Université d'Hasse

Competitive calls for new SI, TEAM and ITP projects will be launched and announced on our website. Nationals of DR Congo are eligible¹ to apply for scholarships for the International Master Programmes (ICP) and International Training Programmes (ITP).

¹ Admission requirements, application procedures and selection procedures differ across the programmes and host institutions.

2 DR Congo and the 2030 Agenda for Sustainable Development

2.1 DR Congo and the Sustainable Development Goals

Following the adoption of the Sustainable Development Goals (SDGs), in 2016 the DRC started the creation of the Congolese Observatory for Sustainable Development , a structure that can monitor, assess and report on the implementation of the SDGs. The country has achieved the contextualization and prioritization of SDG targets; the geographic location of the SDGs at the sub-national level; and the alignment of the National Strategic Development Plan and sectoral and provincial strategies with the prioritised SDG targets.

A report on the sustainable development goals, the [Voluntary National Review 2020](#) (in French only), was published in 2020. Overall, the implementation of the SDGs is based on a multi-stakeholder partnership. Apart from the evolution per SDG, focus has been put on leaving no one behind and on the implication of civil society in public life and challenges of public interest. However, additional efforts are required. A framework for accelerating implementation of the SDGs is being considered. But the important challenge remains the mobilization of resources.

Taking into account the global aspect of the SDGs, the [Sustainable Development Report](#) of 2021² assesses where each country stands regarding the achievements of the SDGs. DR Congo ranks 158th out of 165 countries included in the report. The [DR Congo Country Profile](#) shows that the majority of goals is facing major or significant challenges.

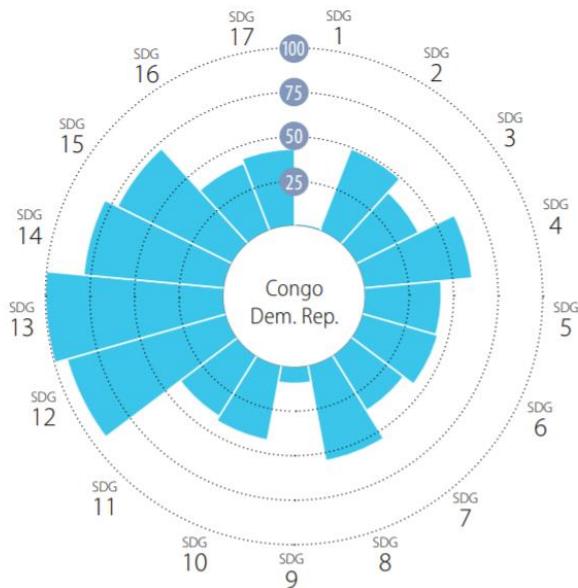

SDG Dashboards and Trends

▼ AVERAGE PERFORMANCE BY SDG

As an umbrella organization that works with calls for proposals, VLIR-UOS supports interventions for and through higher education institutes, supporting them in the areas of education, research and uptake and thereby strengthening them in their role as development actor. Doing so, the impact of the interventions supported by VLIR-UOS can be found in a large variety of sectors. In line with its major intervention area, VLIR-UOS positions itself within the education sector, especially Focused on higher education, research and innovation (SDG 4 and 9). However, through its interventions, VLIR-UOS intervenes in different sectors as well. VLIR-UOS recognises that given the complexity, scale and interconnectedness of current societal challenges, meaningful social, economic and ecological transformations can only be realised by starting from a holistic and integrated approach to the SDGs. When translated into SDGs, the projects that were financed by VLIR-UOS in DR Congo covered mainly, apart from SDG 4 and 9, SDGs 2, 3 and 15. Top sectors for VLIR-UOS in this country for the past decade are health, sustainable agriculture and food security, biodiversity/environment and natural resources, education and technology transfer.

More background information and context analysis on DR Congo can be found in the **geographic Joint Strategic Framework for DR Congo** ([link to add](#)).

The **COVID-19** related health crisis and its consequences are interconnected with many domains of society. Data about the COVID-19 situation in DR Congo can be found [through this link](#).

2.2 Higher education landscape in DR Congo

The Higher education sector is governed by the Ministry of Higher and University Education (<https://www.minesu.gouv.cd/>), which manages universities, higher educational institutes and higher technical institutes. These 3 categories of higher education and university establishments are grouped together into public and private establishments, together with more than 400,000 students and nearly 3,000 qualified teachers at the end of 2018. The higher education and university establishments of the DRC are managed by a management committee made up of a Rector / Director General who is assisted by two General Secretaries (academic and administrative) and a Budget Administrator.

The human sciences are more in demand than the exact and applied sciences, except medicine. Men (students) appear to be in the majority in all faculties. However, women (students) are more present in the fields of communication sciences or public health. Higher education and university establishments in the DRC are recording a large drop out in students when the academic year progresses, the main reason being the inability of many parents to pay academic fees. Overall, the proportion of students enrolled in the third cycle (recruitment in principle based on the performance achieved in the first two cycles) is too low (0.5%), which limits rapid academic succession and the training of senior executives for companies. Efforts are being made to encourage women to take postgraduate enrollment.

For almost 10 years, measures and reforms have been adopted to reduce the difficulties facing the Congolese education system. These reforms are based on the Government's vision for education expressed in the Framework Law on national education promulgated in 2014 and in the Sector Strategy for Education and Training (2016-2025) endorsed by the Technical and Financial Partners, which can be found [through this link](#). In the Framework Law, the Government undertakes to "build an inclusive and quality education system that effectively contributes to national development, the promotion of peace and active democratic citizenship".

The Framework Law adopted twenty-three fundamental options for national education, including "basic education for all", "environmental education, training in sustainable development and climate change", "education in technologies information and communication", "the use of national languages and / or languages of the environment as a medium and discipline of teaching and learning", "the adequacy between training and employment", "the mastery and control of science and technology as essential factors of economic power" and "the promotion of intelligence and critical thinking". We note here the importance given to the teaching of STEM (Science, Technology, Computer Science and Mathematics) disciplines to support a sustainable development of the nation.

For about twenty years, the political orientations of Congolese universities per academic year, have been produced (in the form of circular notes) by the national ministry of higher and university education and published then applied in higher education for a harmonious and quasi-uniform operation. To improve the governance of universities, the technical bodies of the Ministry of Higher and University Education are developing in an evolving and adaptive way a handbook for managers.

In the Sectoral Strategy for Education and Training (2016-2025), three strategic axes have been decided, it is about "Promoting a more equitable education system, at the service of growth and employment", "Creating the conditions for a quality education system" and "Establishing transparent and effective governance". For the higher and university level, it offers "openness to the world and to modern

technologies", "the use of ICT, open and distance learning" and "the strengthening of research". The UNIVERSITIC project, funded by VLIR-UOS and ARES-CCD, has improved the IT infrastructure of 7 Congolese universities and opened them up to the world thanks to new technologies.

In 2011, the modalities of operation and organization of the National Agency for Quality Assurance in Higher and University Education were created and defined. Supported by VLIR-UOS since 2012, it was extended to all HEIs in the country by decree n ° 18/003 of February 2018. This structure aims to support and assist all higher education and university establishments in the country in the process of setting up internal quality assurance units, strengthening their capacities and drawing up, on the basis of other models, internal evaluation reference systems and training, research and doctoral studies programs. It also aims to build and develop with the Ministry of Higher and University Education the reference standards and quality assurance standards for the evaluation and self-assessment of the quality of higher education establishments and University. In this regard, this agency will also be the interface of higher education and university establishments in the external evaluation of quality assurance.

Both the Ministry of Primary, Secondary and Vocational Education (MEPSP) and the Ministry of Higher and University Education (MESU) set up the **Education Project for the Quality and Relevance of Teaching to Secondary and University levels, PEQPESU** in acronym. This 6-year project (2016-2021) is funded by the World Bank. For higher education, the aim is to strengthen relevance in the priority sectors of mining, construction and agriculture. One of the reforms is the introduction in higher education and university establishments of a new results-based management method. For higher education and university establishments, this is the introduction of the Performance Contract (CDP) signed between the institution and the Government. In this contract, the institution commits to improving its performance in agreed areas. In return, the Government, through PEQPESU, undertakes to pay it an endowment to finance this effort. This new management method aims to stimulate the development of higher and university education institutions, to help them carry out their strategic development plan, to enable them to develop short-term programs that meet the needs of the job market and help them to link to the LMD (licence-master-doctorat) system. The LMD system started in 2012 in a few universities through the opening of the renewable natural resources management discipline. This system has started to be extended progressively to other sectors and universities through the Framework Law no.14 / 004 of February 2014 on National Education (art. 98). Since 2018, a normative framework has been produced to provide guidance to the LMD system in the DRC.

Another reform concerns the organization of the third cycle (PhD) for which a decree on its organization has been published since 2015. This reform was completed by the one that targeted the 3 major universities of the country (Universities of Kinshasa, Lubumbashi and Kisangani) to organize postgraduate studies in all the fields they organize. A few other universities have also obtained authorization to organize postgraduate studies, but only in a few specific fields. Consequently, for academic succession, these universities capable of organizing the third cycle must train their own academic succession, but also those of other unqualified universities. Moreover, most Congolese universities have internationalized their research by developing the reception of master's and doctoral students and foreign researchers.

According to the [Webometrics Ranking of World Universities](#), no Congolese University falls within the 2000 ranking worldwide. Within this ranking, the University of Kinshasa (UNIKIN) takes the 4552nd place, and the University of Lubumbashi (UNILU) the 7584th place. Taking into account only the African continent, this means the 192nd place for UNIKIN and the 317th for UNILU out of 1917 institutions of higher education.

2.3 Leaving no one behind

With the adoption of the 2030 Agenda for Sustainable Development, the international community pledged to leave no one behind and to endeavor to reach the furthest behind first. The principle of leaving no one behind can be defined as a three-part imperative: to end absolute poverty in all its forms, to stop group-based discrimination that results in unequal outcomes for disadvantaged populations, and to take action to help the furthest behind.

Following the report on the sustainable development goals for DR Congo, ([VNR 2020 Report \[French\]](#) and [summary in French and English](#)), Agenda 2030 recognizes that everyone counts and deserves to have the right to equal opportunities, regardless of their income, gender, age, race, ethnicity, migration status, disability, location, housing or other characteristics specific to the country context. Priority is therefore given to the interests of the most vulnerable, disadvantaged and marginalized groups so that no one is deprived of their opportunities to fully express their potential because of who they are or where they live.

This principle has even led to the creation of a ministry taking into account the most vulnerable and marginalized people like persons living with a handicap, street children and native pygmy people, with a separate direction for these last ones with the aim to get them more integrated into society.

In 2019, the DRC integrated the handicap and vulnerability dimension into its decentralization program. She also took into account the needs of women living with disabilities in the action plan. In 2018, she ratified the recommendation to end all forms of violence against people with albinism and children accused of witchcraft and to punish the perpetrators.

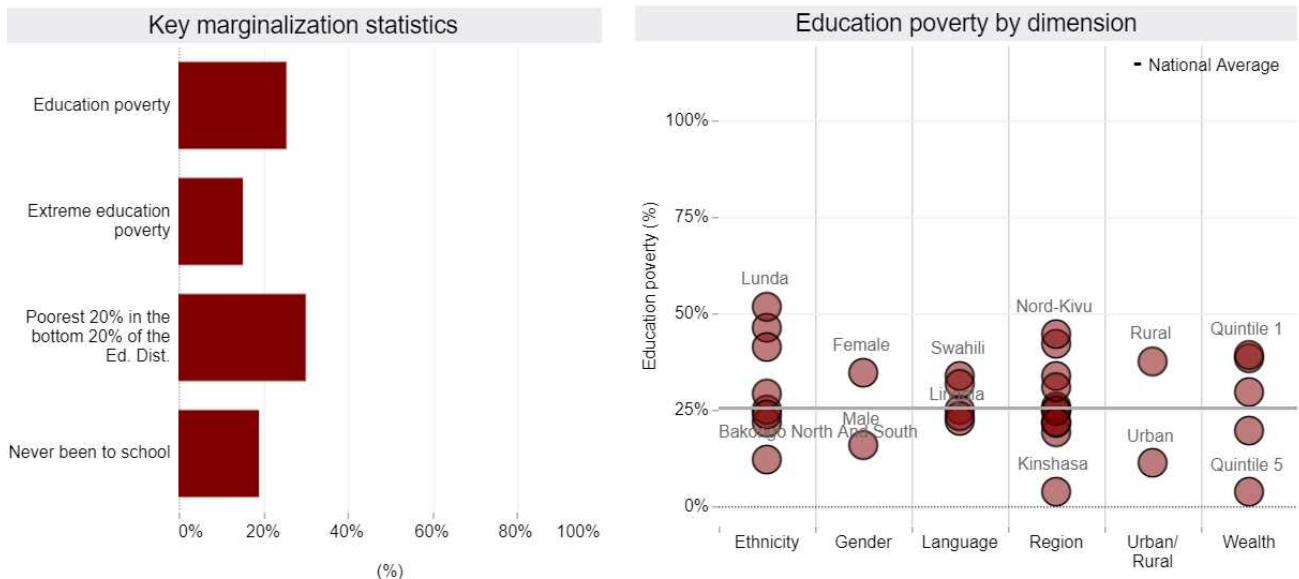

The Education and Training Sector Strategy created a special education directorate to address issues of marginalization and inclusiveness. To facilitate education for all children, the government has launched free basic education. In the same perspective, the government has joined the dynamic of Universal Health Coverage.

In other sectors, there is also a clear will on the part of the government to address this issue of inclusion and equity. To this end, there has been the adaptation of the legal arsenal in the field of both social protection and gender. However, there are still considerable challenges: targeting these vulnerable groups remains very difficult, especially as the disaggregation of the statistical apparatus remains sketchy. Moreover, the mobilization of financial resources relating to these vulnerable or marginalized groups is very low for the time being. This places particular emphasis on redistributive policies beyond the traditional stabilization and allocation policies. The DRC needs drastic and innovative reforms, requiring developmentalist political leadership to meet the ambition of this new agenda.

The UNESCO data on [Deprivation and Marginalization in Education](#) (DME)³ presents the following scheme, showing that challenges remain between the two sexes, between rural and urban, as well as between regions.

³

- Education poverty: the proportion of the population with less than 4 years of education
- Extreme education poverty: the proportion with less than 2 years
- Poorest 20% in the bottom 20% of the Ed. Dist.: what proportion of the poorest 20% are also in the bottom 20% of the education distribution
- Never been to school: what proportion of 7-16 year olds have never been to school

2.4 Multistakeholderpartnership - Stakeholder analysis

The complexity, scale, and interconnectedness of the current societal challenges that the SDG framework is seeking to address, requires a concerted effort of a wide variety of different stakeholders. As such, the principle of multistakeholderpartnership – which promotes cooperation and partnerships at different stages and spanning the boundaries of civil society, private sector, government, and academia – is ubiquitous across the 2030 Agenda. An analysis of these stakeholders is essential for each partnership.

Since the start of the process of implementing the SDGs in the DRC, civil society has stood out through its involvement. She brought her field experience to support traditional development or humanitarian partners. Within companies, a dynamic around the SDGs had been set up under the impetus, among others, of civil society. Congolese companies have begun to convey good practices, especially in raising awareness around the SDGs. Civil society has also presented itself as an interlocutor who offers solutions to political challenges such as peacekeeping.

However, all stakeholders are unevenly informed about Agenda 2030, especially different ministries. The government should thus increase the popularization of contextualized SDGs to both public administration and the media. It should also develop the capacity of these actors. This will involve strengthening national capacities for better information and ownership of the strategies. Therefore, the future

programmes to be worked out should be more unifying and include more the provinces. However, both low financial means and a lack of statistics are a challenge. Therefore, the country has developed in the short and medium term several surveys to obtain data.

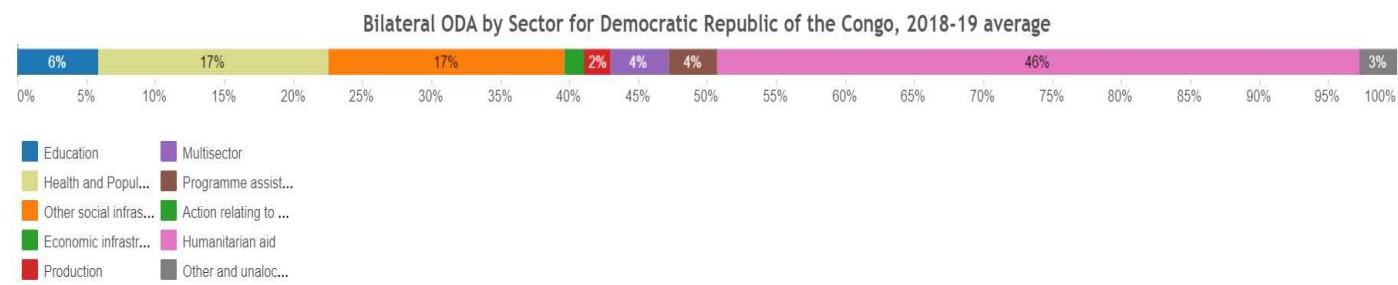

Although efforts have been made, significant challenges in democracy, human rights and governance remain. According to this report of Amnesty International, <https://www.amnesty.org/en/countries/africa/democratic-republic-of-the-congo/> poor households suffered increased food insecurity as a result of COVID-19 restrictions while prisons were chronically overcrowded. Armed conflicts and inter-communal violence continued in some provinces, resulting in hundreds of deaths and the displacement of hundreds of thousands of people. Government forces and armed groups continued to enjoy impunity for grave human rights violations, including extrajudicial killings and summary executions. Conflict-related sexual violence against women increased. The authorities continued to restrict the right to freedom of expression and media freedom. Journalists were imprisoned and human rights defenders were subjected to death threats and prosecution.

Human Rights Watch (<https://www.hrw.org/africa/democratic-republic-congo>) states that the situation remains dire, with more than 5,2 million people internally displaced and nearly a quarter of the population in severe food insecurity. About 120 armed groups are active in Eastern Congo. Many of them, sometimes assisted by abusive government security forces have carried out massacres, kidnappings, sexual violence and other attacks on civilians – often with near total impunity. Repression against activists, journalists, politicians and peaceful protestors escalated in 2020, after some initial positive steps during Tshisekedi's first year in office. The collapse of Tshisekedi's alliance with former president Kabila's coalition in December 2020 may create new opportunities to push forward with stalled reform efforts.

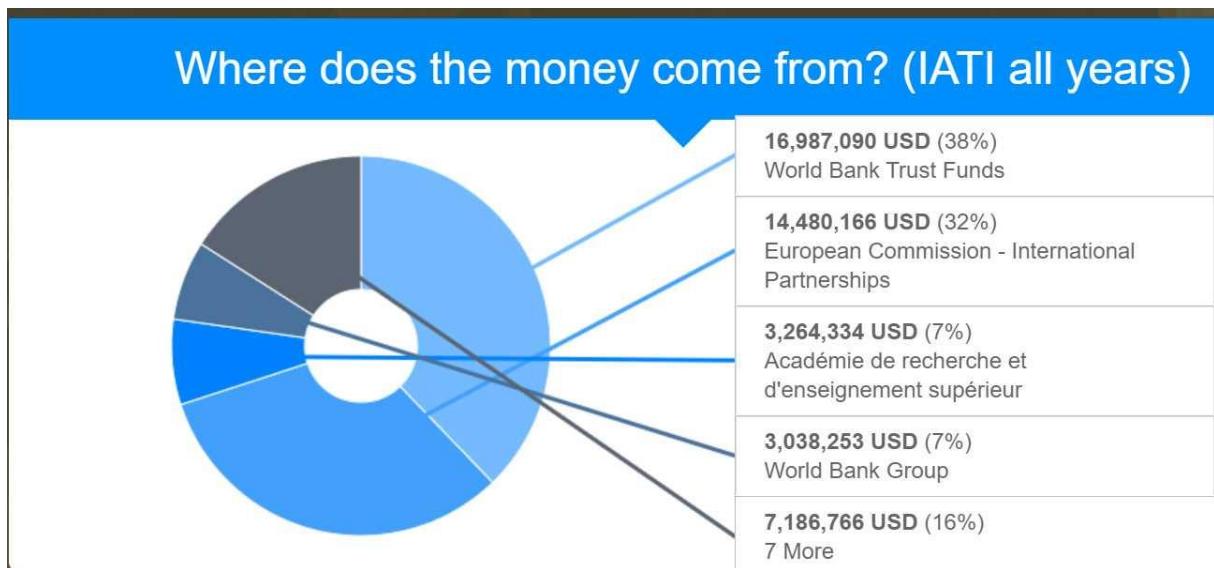

Taking a look at the **development partners** of DR Congo

https://public.tableau.com/profile/thielemans.v#/vizhome/OECDDACaidataglancebyrecipient_new/Recipients the United States represent the main donor of gross official development aid (ODA) in DR Congo, followed by the International Development Association.

The sectors receiving the biggest funding are humanitarian aid with 45%, followed by health & population and 'other' social infrastructure services both with 17%.

Based on data from the International Aid Transparency Initiative (IATI), the World Bank and the European Commission are the main donors in the higher education sector (http://d-poral.org/ctrack.html#view=search§or_code=11420).

3 Synergy and Complementarity with other (Belgian) development actors in DR Congo

3.1 VLIR-UOS approaches to synergy and complementarity

Drawing upon their longstanding common history, VLIR-UOS, ARES and the Institute of Tropical Medicine (ITM) jointly developed the thematic Joint Strategic Framework on Higher Education and Science for Sustainable Development (JSF HES4SD). Through cooperation with civil society, private and public sector, the JSF initiators⁴ aim to further unlock the huge developmental potential of higher education and science cooperation for sustainable development and make it accessible to other Belgian, local and international partners, in different ways: as partner in a multi-actor partnership, as scientific advisor to other partners' projects, partners or policy bodies, as a knowledge broker for sharing state of the art scientific results, information, expertise and experience and for exploration of possibilities for synergy and complementarity. This reference framework for DR Congo will feed into the **platform** that the initiators of the JSF HES4SD plan to create to proactively communicate opportunities and facilitate such cooperation. More precisely, the platform can be used to:

- (i) communicate about the launch and results of competitive calls for projects;
- (ii) communicate other opportunities for projects or scholarships;
- (iii) gather/exchange on collaboration opportunities (e.g. requests for scientific advice);
- (iv) share information about ongoing projects, events and seminars in the country/region.

3.2 Bilateral development cooperation (Enabel) in DR Congo

Belgium ranks 9th on the ODA overview for DR Congo. Thereby, Congo is one of the most important partners of the Belgian Development Cooperation. Since 2000, Belgium and Congo – through Enabel - have worked together to improve the living conditions and the income of 16 million people in Congo (<https://www.enabel.be/content/enabel-dr-congo>). They primarily intervene in the provinces in three sectors: 1/ Agriculture and rural development; 2/ Education and 3/ Health. Concerning agriculture, DRC aims to re-boost its rural areas by developing modern production entities and strengthening small businesses. The education tackles the development of a professional education and training offer that is adapted to the needs of society and business. The health program aims to improve access to quality health care whereby also the management of the health system is being taken into account. Special attention is paid to providing care to victims of sexual violence. Also, the central Ministry of Health is assisted by putting in place a quality medication distribution system, transparent financing of the sector and assuring competent medical staff.

⁴ The three JSF initiators represent 60 Belgian higher education institutions (HEIs), being 11 universities, 32 university colleges, 16 school of arts, and ITM.

3.3 Belgian actors of the non-governmental cooperation in DR Congo

3.3.1 Thematic Joint Strategic Framework on Higher Education and Science
